# Code Coverage Where You Need It with Codecov by Sentry

Codecov is the all-in-one code coverage reporting solution for any any language, CI tool, test suite and code host - giving developers the context needed to deploy reliable code with confidence.

*"Codecov unifies coverage data in one place...For our usage, it provides the feedback on pull requests directly and improves the developer experience to shorten the feedback loop so that they can fix their issues more quickly."*

**Jun Li Staff Software Engineer, Lyft**

### Reduce the guesswork without leaving your workflow

Get actionable coverage insights directly in your Pull Requests and use Status Checks to set customizable quality gates and let your CI process do the rest.

### See ALL of your coverage in one place

Aggregate coverage reporting, see changes over time, and get cross-repo analytics so you have visibility across all your services.

### Spend less time running tests

Run only the tests you need on a PR by PR basis automatically with Carryforward Flags and no additional steps added to your workflow.

## Get started for free

Getting started takes a few minutes. Just sign up with your code host and upload your tests to join the millions of developers that use Sentry and Codecov to fix application problems without compromising on velocity, code quality, or developer experience.
